

BöttcherPro Calcit

Water Re-Hardener for dampening solution

BöttcherPro Calcit is a water rehardener for use in conjunction with reverse osmosis water or with very soft water, to standardise hardness.

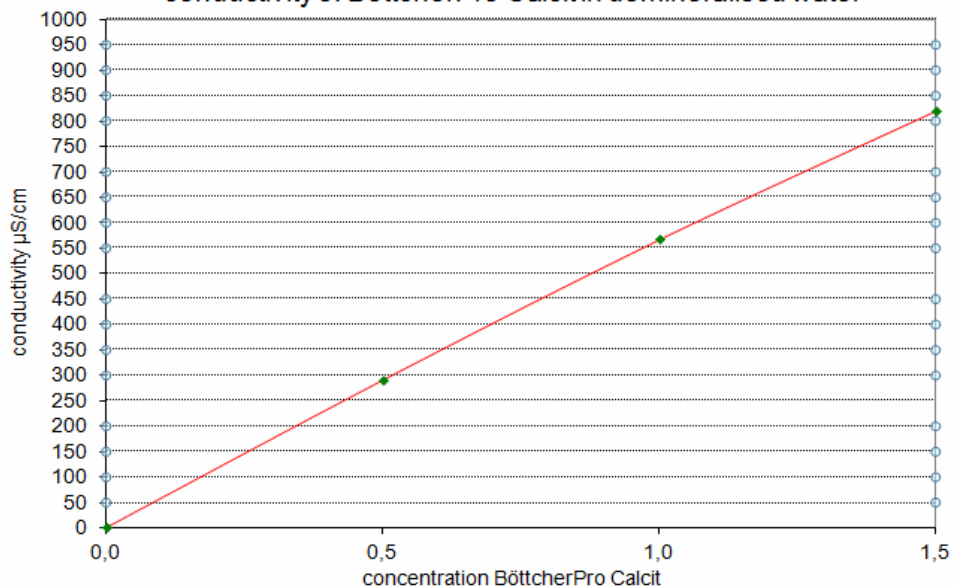

Application

-  for rehardening of demineralised water from all RO-units
-  for very soft water (0 - 4° dH total hardness)
-  dosage 0.5 %
-  constant water hardness of 10° dH (total hardness)
-  no alteration of pH-value
-  stabilizes the ink water balance

Features

BöttcherPro Calcit is added to the RO- water or to the soft water feed lines to the circulation system by the use of automatic dosage pumps. BöttcherPro Calcit works well with BöttcherFount products. After adding BöttcherPro Calcit to the RO-water the concentration can be determined by using a conductivity meter.

conductivity of BöttcherPro Calcit in demineralised water

Note

Systems ▶▶ Printing

- 20 kg can
- 200 kg plastic drum
- 1000 kg IBC

Package

BöttcherPro Calcit is classified and marked in accordance with EC-Directive 1999/45/EC - in its latest version. BöttcherPro Calcit is not a dangerous good in the sense of national and international transport regulations.
