Inking Roller Coldset

Compound	Shore A
511	45
513	45

 Ink form Roller for KBA Commander CT and Commander CL for Coldset and Semicommercial printing

Application

-  Particularly fine, even surface structure
-  Withstands highest dynamical stress
-  Excellent chemical resistance
-  Very good geometrical and hardness stabilities

Features

-  Complimentary resistance test is recommended
-  OEM compounds in new press installations of Koenig & Bauer

Note

-  Two compounds with different properties concerning their chemical resistance allow a exact adjustment on various contact media like Coldset and Heatset inks
-  Highly precise surface processing and tight production tolerances allow exact roller setting for tone-free printing
-  Very even and precise ink transfer
-  Very high service life , lesser adjustment effort
-  Reduced start-up waste
-  Stable print process

Benefits
