## Laminating

Format and transfer roller

Solvent-free lamination (SF)

Compound Shore A

**096 80**

### Application

Format roller in 5 roller applicators for SF lamination  
Nip roller in extrusion coating and extrusion lamination

### Customer values

#### Productivity:

- Increased machine speed due to low self-heating due to improved dynamic, elastic properties
- Reduced cleaning effort and extended cleaning and grinding intervals due to reduced adhesive build-up on the roller surface

#### Quality:

- Constant coating and laminating results thanks to stable process conditions due to low self-heating even at high system speeds
- Constant quality through constant, homogeneous transfer of the typical PU laminating adhesives

#### Sustainability:

- Reduced roller consumption
- Reduced consumption of cleaning products

### Eigenschaften

- Hardness 80 ShA
- Colour blue
- High dynamics, quick recovery
- Ozone resistant

Label

# Boost your Production

## Note

- Hardness variants on request
- Available as roller and sleeve covering
- Variable cut back
